You ask
- We answer

Why does my hair become greasy after shampooing?

Too much head wash shampoo is probably used and the shampoo is not rinsed thoroughly. The shampoo is based on natural guar gum, so it does not rinse off as easily as the regular drugstore SLES salt thickened shampoos.

We recommend trying the cup method, i.e. pour some shampoo into a cup, mix it with warm water and only then pour it over your hair. And if you think it's going to take too long (and it won't), pour shampoo into the palm of your hand, add a little water and then massage into your hair. Then please rinse your hair thoroughly, several times.

Why is the shampoo so hard to wash off and why won't it foam?

Shampoos without the addition of SLS and SLES indeed foam less than those that contain them. That's why we often use such a shampoo faster (because we pour more of it on our hair), complaining about its poor performance. This is a complete misconception. Small amount of foam does not indicate poor hair and scalp cleaning.

Foam is not indicative of cleaning. Applying too much shampoo to your hair and insufficient rinsing may cause a greasy effect. So what can we do? We recommend trying the cup method, i.e. pour some shampoo into a cup, mix it with warm water and only then pour it over your hair. And if you think it's going to take too long (and it won't), pour shampoo into the palm of your hand, add a little water and then massage into your hair.

Why does hair get greasy quickly after using a conditioner?

If the mask weighs down your hair - don't give up using it, just apply it on dry hair, before washing. Then rinse the mask with warm water and apply shampoo.

Why do I have more dandruff after use?

Dandruff is not caused by conditioners or shampoos because it is fungi-related. Getting rid of dandruff requires special dedicated shampoos and conditioners. Dandruff can also have allergic sources if you are allergic to any component of the product. Again, we suggest trying the cup and intensive rinsing method in order to remove the shampoo residues.

Why does the scalp itch after use?

Itching of the scalp is a symptom of abnormal rinsing of the shampoo from the skin or an individual allergy to any component of the product.

How much conditioner should I apply to my hair; should I apply to dry or wet hair?

Apply a small amount - the equivalent of a tea spoon. We can apply both to dry or wet hair. There are two possible patterns of use: traditional, meaning shampoo followed by a mask, or - if the hair has a tendency for greasing - mask followed by a shampoo.
